

IT Expert Slays Trolls on Dearman and his Sites

[April 24, 2015 j](#)

Thanks so much to an IT expert who posted this message as a reply to trolls on vid.me. The thread can be viewed here:

<https://vid.me/Z3bO#comment-121186>

Dear V_A_H, Unlike you I am an IT Expert. We know [Advanced7s.com](#) has the Same IP as [ns2.2heartsdelight.com](#) The site was recently deleted but you can see remnants here. <http://www.ip-adress.com/whois/advanced7s.com> The IP address: 142.4.16.28 If you do the same thing for [ns2.2heartsdelight.com](#) <http://www.ip-adress.com/whois/2heartsdelight.com> It has the same IP address 142.4.16.28 If you just type the IP address <http://142.4.16.28/> into your browser you get <http://www.nhs-labs.com/acai/lp> This means there is a primary domain set up on that IP called [nhs-labs.com](#) at

bluehost This is a both a static and dedicated IP address (only one person owns it) Bluehost provides a dedicated IP to ranges in the 142.4.16.2 to 142.4.16.255 range there are no shared IP's in this range. If it was a shared IP like Bluehosts shared range

you would get no website configured error

example <http://69.89.18.20/> will give this error Bluehost IP addresses in the ranges 69.89.18.2 to 69.89.18.255 are shared IP addresses. These are owned by more than 1 person. A single person owns 142.4.16.28 and we can prove who that is.

Example sites that also owned by Ricky that are on 142.4.16.28 <http://www.statsnode.com/www/www.naturalvitalityresearch.com/http://www.statsnode.com/www/www.mwlcsc.com/http://website.informer.com/massweightlosscontrolsystem.com> <http://www.statsnode.com/www/www.amazingsupergreens.com/> etc

NHS_LABS.COM is under a hidden registration (Domain owner is a proxy). <http://www.who.is/domain-history/nhs-labs.com> but

if you search hard you will find Ricky did create it <http://zakumimerchandise.wix.com/weightloss#!about-us> Another proof there just happens to be a directory called

rickydearman and all his other sites off that IP are Ricky

Dearmans sites <http://www.nhs->

labs.com/rickydearman/ http://www.nhs-

labs.com/advanced7s/ http://www.nhs-

labs.com/mwlcs/ http://www.nhs-

labs.com/amazingsupergreens/ http://www.nhs-

labs.com/massweightlosscontrolsystem/ http://www.nhs-

labs.com/naturalvitalityresearch/wp-content/uploads/ This is

a dedicated IP and I have proven this. Now we have proven
you do not know what you are talking about please do not try
to speculate that ns2.2heartsdelight.com is not a DNS server.

This backup DNS server was activated by adding this server to
your DNS configuration on your computer. The reason there
was a list of sites that did not work was because these were
names associated with this DNS server so they could not be
resolved as it is no longer available as Ricky had taken. There
are breadcrumbs of this all over the net and the configuration
files at this address also still show the names and IPs servers.
